

# WHERE TRUESHOT WINS

## Durability of Canister

TRUESHOT's canister is fully enclosed, protecting it from punctures and tool bag damage. Other alternatives use more exposed containers that appear more vulnerable to knocks and sharp tools.

## Convenience in Use

With TRUESHOT, when you're out, you're out — simply swap the canister and carry on. Some alternatives require funnel refills from tubs of chalk powder, adding time, mess, and hassle.

## Cross Mark Capability

TRUESHOT's unique nozzle allows for cross marks — something standard round nozzles cannot achieve.

## Nozzle Strength

TRUESHOT's robust nozzle is impact-tested — it survives drops onto concrete and keeps working. Thin, protruding nozzles found on other products raise questions about bending or breaking on site.

## Accuracy of Marking

TRUESHOT's fixed nozzle ensures consistent accuracy, no matter the angle. With other designs where the nozzle moves with the button, marks can shift a few millimetres depending on orientation.

## Close Distance Performance

TRUESHOT is tuned for versatile use: crisp marks up close without splatter, but powerful enough to spray up to 100mm away. Long-range focused products may compromise clarity at shorter distances.
